

Office 2010 update (full day) with optional “Windows 7” update module

Course outline

Office 2010 update (full day) is an ideal course for people updating from an earlier version of Microsoft Office (such as Office 2003) to the new Microsoft Office 2010. The distinctive changes in the interface (eg: replacement of drop-down menus with “The Ribbon”) can slow down and frustrate staff as they move from the old interface to the new interface. This course solves those problems.

As well as learning how to navigate the new system, participants also learn many of the new exciting and impressive features available in Office 2010 which will improve the quality and efficiency of their work.

As well as plenty of exercises for participants to work with during the session, there is also ample time built in to this course for participants to ask questions and have any subjects covered in depth, according to their needs - making this an ideal course personalised to your staff’s requirements.

This course covers Word, Excel, PowerPoint, Outlook and Windows 7 (or any combination required).

Course duration

Full day (9am to 4pm) - optional Windows 7 update module (45 minutes)

Covered in this course

Subjects covered in this course include:

- How to find where each feature is
- The new “SmartArt” feature
- Working with the new “File” tab
